

Operations Models can often explain little puzzles we see in everyday life...

1. Who would be the most efficient manager?
2. Who would be the least efficient manager?

Relative time to do jobs						
	Mgr	Acct	Sales	MIS	Engr	
Fred	11	12	11	7	9	
Tina	9	5	13	8	5	
Betty	7	2	4	5	12	
Harry	9	11	15	10	3	
Joe	29	29	35	27	26	

3. To minimize TOTAL time, how would you *intuitively* assign people to jobs?
4. Find the optimal solution. Who would be the boss?
